Sectra launches next-generation mammography workstation designed for high production

At RSNA 2009, Sectra launches a new breast imaging PACS workstation built on Sectra RapidConnect™ technology. With this next-generation mammography workstation, Sectra focuses on customer productivity and wide area radiology.

In 2003, Sectra was the first vendor to provide a multi-modality workstation tailor-made for high-performance screening. At RSNA 2009, the company introduces an entirely new mammography workstation built on Sectra RapidConnect technology. The new release combines ultra-fast mammography workflow with freedom to read from remote locations while maintaining full productivity.

Sectra RapidConnect, a core component in Sectra PACS, is a patent-pending technology that allows physicians to cooperate and efficiently share the workload at full productivity from other hospitals or from home on a global basis, also for large volumes and poor networks.

“We have used Sectra PACS for several years and a year ago we upgraded to the latest generation. It enables effective centralized reading and facilitates workload sharing among our imaging centers. This allows us to optimize utilization of radiology resources and competencies,” says Dr Fiocconi at SCM Centre Melunais d’Imagerie Médicale.

“We are very pleased that all the benefits that our customers derive from our next-generation PACS and RapidConnect can now also be offered for mammography,” says Maria Liljeqvist, Product Manager at Sectra.

Visit Sectra at RSNA 2009 in Hall B, booth 9124.

About Sectra’s medical operations

Sectra develops and sells IT systems and products for radiology, mammography and orthopedic departments. More than 1,000 hospitals worldwide use the systems daily, together performing over 50 million radiology examinations annually. This makes Sectra one of the world-leading companies within systems for handling digital radiology images. In Scandinavia, Sectra is the market leader with more than 50% of all film-free installations. Sectra’s systems have been installed in North America, Scandinavia and most major countries in Europe and the Far East.
