Secure EU communications

**SECTRA**

# Encryption for EU security requirements

The EU Council Security Committee (INFOSEC) was formed in recognition of the need to protect sensitive information in the EU domain.

As one of the committee's main achievements, the Council INFOSEC Selection and Procurement Scheme (CISPS) for cryptographic products was established in January 2003.

## Tiger<sup>®</sup> XS - Secure EU communications

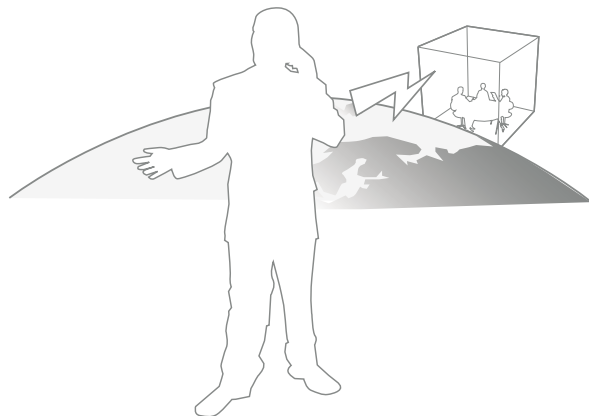

Sectra is now introducing Tiger XS - a personal voice encryptor that protects mobile and fixed telecommunications. Tiger XS is approved for communication up to and including the high security level SECRET UE. This crypto product is CISPS listed and available for purchase for all EU member states and organizations, allowing them to protect both national and international telecommunications.

## EU-approved security design

Tiger XS is based on a widely acknowledged security design, which can also be found in previous EU- and NATO-approved Sectra products, such as the K710 EU and NSK 200 secure telephones.

## Security made user-friendly

Using a security product has never been easier. Insert your access card, enter your code and select the person you want to talk to from a list. Once you are connected, everything you say will be secure.

**Security wherever you are**

Tiger XS is a flexible encryptor that connects to your mobile phone via Bluetooth®. With Tiger XS you are safe to exchange EU classified information over mobile GSM networks or ordinary telephone lines – from your office desk, at home or on the road. This means that security is guaranteed wherever you are!

**Secure voice, data, SMS and fax**

Tiger XS enables secure mobile voice communications and secure messaging (SMS). At the office, you can also use Tiger XS as a secure desktop phone and fax by docking it with the optional desktop cradle unit, the Tiger XS Office. Government officials on the move can easily use Tiger XS for secure file transfer or for remote access to a classified computer network. At Sectra, we are committed to ensuring that you can communicate securely whenever you need, wherever you are.

*Tiger XS Office extends use by adding a secure desktop telephone with fax functionality to the Tiger product line.*

“Sectra is the first company to offer an EU-approved voice encryptor for mobile communications. Tiger XS secures EU telecommunications up to and including the security level SECRET UE.”

### **Sectra protects EU communications**

Sectra develops and sells products for secure voice and data communications. The company has developed crypto products for Swedish defense and government customers since the 1980s. In recent years, Sectra has established cooperation with national security bodies in many European countries as well as leading EU organizations. With strong core expertise in encryption and focus on the user-friendliness of products, Sectra contributes to protecting the transmission of classified information within Europe.
